**SURGICAL INSTRUMENTS
OF THE HINDUS**

WITH

**A Comparative Study of the Surgical Instruments of
the Greek, Roman, Arab and the Modern
European Surgeons**

BY

GIRINDRANĀTH MUKHOPĀDHYĀYA, B.A., M.D.

Fellow of the Calcutta University, McLeod Gold Medalist in Surgery, Formerly Lecturer on Surgery, Calcutta Medical School and College of Physicians and Surgeons (Bengal), Member of the Asiatic Society of Bengal, Life Member and Professor of Botany, Indian Association for the Cultivation of Science, Examiner, Calcutta University.

Griffith Prize Essay for 1909

In Two Volumes

Vol. II

396 Illustrations in 82 Plates

Published by the Calcutta University
1914

PRINTED BY ATULCHANDRA BHATTACHARYYA
AT THE
CALCUTTA UNIVERSITY PRESS.
Senate House, Calcutta.

PREFACE

Much trouble has been taken with our illustrations, but the author is fully conscious of their many defects. I am greatly indebted to several authors mentioned in the legends to the plates as the readers will find certain of their illustrations copied in this volume. It was found necessary in a comparative study of the surgical instruments used by the different nations of the world. It has been my wish to render due credit to all persons for the illustrations by which they may severally have contributed to the advancement of our knowledge of the subject, and I have never assumed to myself drawings, which belong to others. For those illustrations, not otherwise acknowledged, the author is solely responsible.

For his skill and patience in drawing and printing these figures I am glad to take this opportunity of thanking Mr. K. V. Seyne.

The author deems it a pleasant duty to express his thanks to the University of Calcutta for the liberality displayed in the matter of illustrations.

80, RUSSA ROAD NORTH,
Calcutta, February, 1914. } G. N. MUKHOPĀDHYĀYA,

- 1.—Representation of the mode of reducing dislocation of the thigh outwards, as given by M. Littré (*Œuv. d'Hipp.*, tom. iv, p. 305) ... 89

A mistake in the figure given by M. Littré is here corrected.

A. A lever applied to the nates of the luxated side, and acting from without inwards, in order to bring the head of the bone into its cavity.

B. Another lever, held by an assistant, put into one of the grooves of the machine, and intended to act against lever A.

C. Grove in which the end of the lever A takes its point of support.

D. The luxated member.

EE. Extension and counter-extension.
